

# Pulley System

Tuesday, September 16, 2025

4:15 PM

(first copy of plan)

## Plan For Pulley Project

1. Create a blueprint of pulley with free-body diagrams
2. Establish my givens + what I'll be looking for
3. Create models of system + masses on inventor
4. Print models
5. Weigh and measure components of system, calculate for time it takes for lighter mass to come up
6. Run system, measure actual time
7. Compare actual and theoretical time and % error

1st demo for system

1st demo for system

Looking for:

Acceleration ( $\vec{a}$ )

Force of tension ( $\vec{F}_T$ )

And eventually time ( $\Delta t$ )

Mass 1 (bigger/heavier mass)      Mass 2 (smaller mass)

$$F_{Net} = M\vec{a}$$

$$F_{Net} = \vec{F}_g - \vec{F}_T$$

$$M\vec{a} = \vec{F}_g - \vec{F}_T$$

Final Eqn:

$$\vec{F}_T = \vec{F}_g - M\vec{a}$$

$$F_{Net} = M\vec{a}$$

$$F_{Net} = \vec{F}_T - \vec{F}_g$$

$$M\vec{a} = \vec{F}_T - \vec{F}_g$$

Final Eqn:

$$\vec{F}_T = \vec{F}_g + M\vec{a}$$

Specific Models used in system

Masses:

hole used to tie string around

## Specific Models used in system

Masses:

Top of Pulley

# Ai Mechanical arm

- includes fingerprint scanner for authentication
- extendable
- Will grab anything within 5m
- powered and operated by voice commands
